

**Amendments to the Specification:**

*Please amend the paragraph beginning on page 1, at line 1 as shown below:*

The invention concerns a holder for a data carrier, consisting of at least one bottom side and one topside, with between those two a lift up space, and fitted with sides, which connects the topside and the bottom side. A holder like this is in general known and being used for putting away for example a disc form data carrier, like a ~~cd or a dvd~~, CD or DVD, as also like for magnetic data carrier, like a tape.

*Please amend the paragraph beginning on page 1, at line 10 as shown below:*

Such holders can sometimes be piled up or placed in a rack in a pile above each other held up together. From the piled up holders there only can be seen one side, ~~[[de]] the~~ top- and bottom side are covered up with the ~~[[on]] top~~ and underneath placed holders. The visible side is provided ~~[[of]]~~ with information which is concerning the data carrier which can be put inside. A purpose of the invention is to make the side better visible. In a few cases the side is provided of information which will be better visible by this way.

CF  
10/7/09

*Please amend the paragraph beginning on page 1, at line <sup>35</sup>~~17~~ as shown below:*

It is positive when the connection made ~~through~~ through the side between top- and bottom side is at least partial spherical in cross-section. Because of the spherical form the connecting side between the top- and bottom side will be longer. The side is not the shortest connecting line between top- and bottom side. Because of that more information can be shown. The side is for example spherical or has a spherical part.
